Control of Meters in Balenet Produced by Tama Group

Tama netwrap is manufactured with a GUARANTEED MINIMUM length, as stated on the packaging.

All production machines, in all production sites, operate with the same calibrated metering systems, all of which are checked and verified once or twice per year, depending on the machine. The calibration is performed according to controlled procedures. These procedures are used by all our production sites .

In addition, roll length is regularly measured and checked on a roll 'un-winding' unit to verify the accuracy of the metering equipment .

Tama netwrap complies with the German DLG standard as well as the American ASABE standard.

Signed and Authorized by:

Evelyn Mueller-Lyn
